I. Overview of Validations

This document provides all validations pertaining to FAADC Module in FPDS.

FPDS will validate the data submitted to the Financial Assistance Module based on these validations. Types of validations include:

- Formatting such as verifying that dates are valid.
- Adherence to defined conventions such as the format for the Financial Assistance Identification Number (FAIN) for DoD.
- Code validation (e.g., verifying Contracting Agency Code is a valid code).
- Validating the Assistance Listing (formerly known as CFDA) entered in the records that exist in Assistance Listings.
- Ensure that the Program Source Code is valid.
- Use-case specific (e.g., for Modifications, the entered PIID must match a PIID for an award that already exists in FPDS).

Validations specified here are for data reported in FPDS for the Financial Assistance Module.

II. Guide to Validation Specification

The format of each validation entry includes Validation Reference Number, Data Elements (or Other Information Required for the Validation), and Validation Requirement.

Validation rules are organized by the data dictionary grouping and then by the data dictionary item:

- a) If the data dictionary group is not reportable then none of the validation rules apply to that group.
- b) If an item within that group is not reportable then validation rules for that particular item does not apply.
- c) If an item within that group is reportable then validation rules for that particular item do apply.

If the data element is not reportable as shown in the Use Case Summary, the validation rule does not apply for that data element. If a cross validation (validation dependent on two or more data elements) includes an element that is not reportable, the validation is not performed.

The Use Case Summary (in the Data Dictionary) defines which data elements are required for each use case. The Use Case Summary also defines data elements that are optional and not applicable.
