

## **GETLIST RULES OF BEHAVIOR**

**Federal Procurement Data System (FPDS)**

**“getList” Rules of Behavior**

## 1. Introduction

The Integrated Acquisition Environment (IAE) of General Services Administration owns and manages the Federal Procurement Data System (FPDS), a post-award database that houses all procurement and contract award data.

Occasionally, users have a demonstrated need to be able to use a “getList” command to retrieve data from the FPDS database. Upon PMO approval to proceed, all parties are expected to abide by the following rules in order to present the proper information to the end users.

Parties failing to sign the agreement and comply with the terms will be denied access to this service.

## 2. Purpose

The intent of this getList Rules of Behavior document is to formalize the responsibilities of participating parties with regards the use of the “getList” service to retrieve data from the GSA IAE “Federal Procurement Data System (FPDS)”.

The use of “getList” is approved on an as-needed basis. All parties utilizing this method must abide by the terms outlined in this agreement.

## 3. Duration

This agreement shall remain in effect until superseded or canceled by the “\_\_\_\_\_” and General Services Administration (GSA) offices involved. This agreement shall be terminated 30 days after written notice to the other parties by any of the parties involved.

## 4. Scope

This getList Rules of Behavior document is to determine the responsibilities of approved agencies and their use of data retrieved from FPDS.

## 5. Responsibilities

5.1 The users permitted to download information via “getList” will:

5.1.1 Utilize staff familiar with BOTH the FPDS system AND procurement policies and procedures to retrieve and analyze data.

5.1.2 Contact the FPDS PMO with any questions related to the manner in which the data is being presented by the users.

5.1.3 Not misrepresent the data downloaded from FPDS.

5.1.3.1 Misrepresentation of the data includes both intentional and accidental omission of rules, process, exclusions or other guidance that is used to generate legitimate information. A few examples of misrepresenting data include creating a report that purports to show socio-economic information but which contains none of the requisite SBA rules and exclusions or identifying an entity as being small or large without benefit of the business process and rules regarding size determination, entity representations, entity certifications, etc.
